Abstract:

Education plays a vital role in the life of a person. With the development of technology, the traditional method of teaching is increasingly being replaced by ways that are more technical. This is resulting in more easily available information for the learner, according to learners own pace, time and convenience. But this advancement in the technical or digital modes of learning does not mean physical absence of a teacher. To deliver quality education the need of blended mode of learning- a combination of the physical and digital tools is necessary. In the following paper it is tried to bring out the various aspects of blended mode of learning.

Keywords- Blended learning, Traditional learning, online learning

Introduction-

Traditionally teaching is associated with the classroom, face to face interaction with the teacher, homework, examinations and books. The emergence of technology has transformed our education and more technical and digital concepts of learning are now introduced. Most of the students are techno savvy but they use the technology for recreational purpose. The need of making the Indian education system digital friendly was felt. All this lead the educationists and
