26.	The New Face of Socially Engaged Jainism Dr Anupam Jash	36

Karma Theory Prof. M.R. Gelra says that mathematical study of Karma theory will be useful because It may be useful to detect the forthcoming diseases and their preventive solution for betterment of Human life. Similar cosmological Model will help to explain the probable location of any being after death according to their good and bad deeds of present life. In the Cosmological Models number theory is deeply involed. Dr. G.G. Joseph says "What is being suggested here is that further work on this aspect (i.e. theory of transfinite numbers) of Jaina Mathematics may prove fruitful in future research on the foundation of mathematics – That Jaina Literature from 1500 to 2000. Years old may hold valuable clues to the very nature of mathematics is an exciting thought." The wordly type of Mathematics found in Gaòitānuyoga or in Karaḷānuyoga and the works of Sṛidharācārya. which is available among the works of these Mathematicians of Jaina Tradition are able to solve many problems of Society in the field of Mathematics. Hence the knowledge and study of Gaòitānuyoga is essential for the society which has already solved many problems and it can solve the some of the other problems which society facing at present. The Deeper study of Gaòitānuyoga may show the path of solving infinite paradoxe, and many controversies of Number Theory.

## Forgiveness across Major World Religious Traditions

Samani Amal Pragma

Forgiveness is a concept with deep religious roots. It is an important quality for the maintenance of successful relationships. Religion can function as an affecting people's beliefs, emotions, actions, and goals related to forgiveness. Major world religions believe that forgiveness produces many physical and psychological benefits, and can

toward transgressors that shift the goals of their followers from revenge to the repairing of relationships.

Keywords- Offence, compassion, repentance, reconciliation and supreme forgiveness
