Abstract

The 21st Century is the century of knowledge and knowledge capital, the society requires holding sufficient quantity of human asset with desired level of ethics, values, skills, attitude and knowledge Capital their only it said to be an advanced society to complete in the global contest on the basis of above decorum. We may classify our Indian society in three categories like developed, developing and under develop society. It is fact because of only economic status and availability of resources but more or less our administrative failure in implementation of public health scheme and in effective managerial assistance in strategy formation and their implementation. It is fact that is India one the resource starved nation in the world, but it doesn't mean it should be remain stand with the begging hand before the world community. It has become the prime need of the hour to review our managerial system in order to ensure availability of Public Health services to the needy persons on the priority basis and their timely appraisal by the independent agencies. This Research paper is focused on the critical analysis of desirable Competency of managing body of public health services and there actual Performance on the ground. Similarly it will also suggest the

Mod and Means for entire satisfaction of Policies, beneficiaries, Society, and the implementation Machinery.

The Research Paper is based on Primary and Secondary data and their proper analysis with the tools. The area of studies is Districts Sidhi of Madhya Pradesh where the death rate from diseases like Malaria, fetal death and death from mal nutrition is comparatively more than the other parts of the County.

KEY WORDS: Managerial, Rural, Tribal, Health, Evaluation.

INTRODUCTION

Sidhi is situated in the North Eastern Part of M.P. Surrounded with Mirzapur and Sonebhadra Dist. of Shahdol. Umriya. Satna and Rewa of M.P it is Forest rich and mineral rich area with three national Parks know a Sanjay Tiger reserve. Bagdara Block deer century and Sone croco dile park in the great sone river apart from this it is fumes for Neel Gai. Bears Pig, Tiger, Wolf, Leopard and money colorful birds forest of Sidhi is one of of the rich belf of Trace Bamboo sal, Mahua, and Tendua (Biidi patta) Harra, Amla, Baheda and Many other Commercial and medicine rich herbs and rhea zooms.

Late 2005-2010 When the country was ride pressure to meet out growing 7 demand of power the central as well as state Government of Madhya Pradesh have opened the doors to private sector to eatable New Thermal power units along with a Cement plant to utilize the waste of thermal units I.E. fly ash. Apart from these power + cement plants other many ancillary units come up to

support about Mega plants. These are explosive compromise Wire Company, Engineering, Electrical and many service providing companies have also joined this area.

In order to provide infra structural support life Root, housing, School, College, Shopping, Bank stone Cresture Logistic, Trove and travel Industry is attracted to Words this region.

It has become a play ground for blind race and pseudo competition Because of this emplaned migration of working – non working technical, non-technical and many professional and non-professional including instilled wove fever from other states joined this area in search of means of survival self-employment and career on the other hand the innocent sons of soil (Tribals and poor for means) have been driver out to black food.

The demo graphic analysis is still impridetable because of access migration of skilled outsider to this place and outgoing migration of unskilled locals to other states live Gujarat, Maharashtra and Chhattisgarh. It is a threat for the existence of local culture and therefore dominated say tribals and other traditional quantities having 60% of total population. i.e. 20 lacks from Sidhi and Singrauli district (Singrauli is newly formed district early it was part of Sidhi only) the public health condition are to miserable because of many region, but the most dominating further are as follows-

1. Waterborne diseases.

2. Community in hygiene living style.
3. Diseases because of in awareness
4. Disease because of Mal nations and poor diet.
5. Education based distaste.
6. Distribute due to air and water pollution.
7. Poor education, in awareness and poverty etc.

The major disease of the area are skin disease dental problems, stomach, Malaria, Typhoid immature delivery anemia, eye disease having problem delivery problem and you'd children death.

A part from above the this area the accidental death as well as, pregnant death cases area in increasing order due to the lifestyle and driving habit. The Tribal's and few other category of the society are found to be gussying in extraditing local wine called Mahua. This is very famous because of access availability of Mahua crop every year. People have got an initial illegal right to take out wine from Mahua for self-use as usual sale too.

The lit variety level of rural and urban Sidhi Singrauli is just closer to the other districts of M.P. but the academic standard is to poor. Their performance is state PSC, UPSC and staff selection test banking railway and in private sector also is very poor.

IMPORTANT HEALTH INDEX OF SIDHI-

A Comparative statement is below-

TABLE- 1

SN	Séances	National	State (M.P.)	Sidhi
1	IMR	50	62	59
2	MMR	212	310	337
3	Death Rate	7.6	7.7	7.8
4	Birth Rate	22.5	25	26.1
5	Sex Ratio	930	904	910

IMR= Infant Mortality Rate

MMR= Maternal Mortality Rate.

This table indicates that the MMR Index is very alarming and it needs to be focused and special Major to be adopted to minimize it. As we see above table that MMR rate 337, Sidhi is as against to 212 of national index. Similarly the death rate is also higher in case of adult that is 7.8% as against 7.6 of national index.

Future we find the birth rate is also too high that is 26% against 20.5 at National level. But the sex ratio is also less as in Sidhi District we have 910 in comparison to 930 as National Level.

By looking above table and discussion it appears that the public health conditions in Sidhi as whole a really matter of serious concern.

TABLE-2

Block wise distribution of health services in Sidhi District-

SN	POPULATION	NAME OF BLOCK	DIST. HOSPITAL	CHC	PHC	SPHC	NO. OF BEDS
1	269675	Sihawal	-	1	6	32	80
2	289415	Semariya	-	1	3	33	50
3	163423	Majhauri	-	1	6	26	80
4	88247	Kusmi	-	1	3	18	50
5	261438	Rampur Nakin	-	2	7	36	110
6	54317	Urban Area	1	-	-	-	200
Total	1126515		1	6	25	25	570

CHC= Community Health Centre, PHC= Primary Health Centre, SPHC= Sub Primary Health Centre.

It appears that the availability of health services are too poor in comparison to national and International standard similarly to Doctor's Population ratio.....is very low. That is why people from Sidhi are bound to move out to nearby states and cities like, Varanasi, Allahabad, and Jabalpur Etc. for health services. This effects there economy and Social system. sometimes the

people from BPL category become helpless to affords table treatment from the outside states like up and Maharashtra and death rate get increased

Status of private sector hospital and other health services.

Table No. 3

S.N.	Name of Hospital	Nature of Services Provide	Bed Capacity	No. in House Doctor
1	Mishra Nursing Home	General	80 (approx)	5
2	D.K. Hospital Sidhi	General Medicine	10	3
3	Birla Hospital	General Medicine	10	2
4	Singh Hospital	Genie	10	2

It is clear from table no. 3 in Sidhi it is clear from table no. 3 in Sidhi there is no any hospital in govt. private sector to provide specified advanced treatment service like censer, heart, kidney, Nero, spine, liver, and surgery. Etc. population this area are forced to visit other state in search of above services after paying big amounts however the poor people cannot effect above costly health services and bound to be depend on the mercy of god budget allocation and financial expenses of previous year.

S.N.	Place of Hospital	Monthly Expenses of Treatment (Lacks)	Monthly Expenses of another heads (Lacks)	Total (Lacks)
1	District Hospital	2,545,819.00	120,866.00	2,666,685.00
2	Semariya	44,455.00	4,455.00	48,910.00
3	Rampur	1351.00	1,30.00	1351.00
4	Majhauri	160.00	64.00	224.00
5	Kushmi	91885.00	870.00	92755.00
6	Sihawal	28456.54	413.00	28869.54
Total		2,712,126.54	126,668	2,838,794.54

by expending this much amount in health services as an optional cost excluding other administrative include on pay, Allounces, housing, travel, training, development, transport, misslenious, expense maintenance building etc. which could be double to the of rational cost there for the actual expense of the **2,838,794.54** including medicine.

We can say that effected investment health the results share still below average in the form of quality health, production in death rate, sex ratio, and migration of patents to other states is remain unaffected.

This study shows the management of health services of Sidhi Dist. is required to be reorganized in following orders.

RESULT & DICUSSION-

- ✓ Fisting of accountability of Medical agency.
- ✓ Frequent auditing of health condition and quality health services being provided time to time.
- ✓ Organizing Medical Camp as many as possible in remote areas.
- ✓ The health awareness Programme must be undertaken by NGOs/ Government and private health agency in Tribal area to guide them too take the help of Prescribe health agencies like PHC, CHC, and District Hospital in state of traditional system.
- ✓ These health's Program me and scheme should be clubbed with other benefits given by government like subscribed food drain, PDS, MANREGA, Educational Scholarship, Tribale and Ministry benefits Schemes.

It is also suggested that Government should be manufacturing and using of local wine called Mahua and other tobacco products, it is said that the Tribal belts of India are facing this common problems of health and the region behind their poor economy, Purchasing power, education standard, PCI, Health Index, death rate and Human Resource Development index in very much below the National

standard because these people are bound to invest their half of the income Medicine only.
